2. Descripción y objetivos de la materia

The course examines the numerous ways in which states have brought order and organization to their international conduct, with special emphasis on the functions and activities of formal international institutions. These organizations are the creations of states, but we will also look at nongovernmental organizations, like Greenpeace and Human Rights Watch. The course begins with a general overview of international organizations (IOs) as an academic study topic. Students will be asked to analyze two fundamental questions regarding IOs. Why do IOs exist? And what role do they play, if any, in solving global problems? Specific international organizations will be introduced in depth. We will cover general purpose organizations, like the United Nations (UN), Organization of American States (OAS), as well as those with more specialized functions, like NATO (security), the WTO (trade), the IMF, World Bank, the New Development Bank (finance and development), WHO (global health), and the ICC (criminal justice). The course will center a great deal of attention to Latin American Regional Intergovernmental Organizations such as UNASUR, CELAC and other IGOs. The main goal of this course is that students develop a theoretical as well as practical understanding of international organizations (IOs) and the global problems they attempt to address. Upon completion of the course, students should be able to articulate the leading explanations within political science for why IOs exist, controversies surrounding IOs in the context of international relations theory, why they are thought to help solve global problems, and the major challenges IOs face in meeting their objectives.

Metodología

This course consists on a series of lectures, seminars and class discussions about the nature, structure and functioning of international organizations based largely on two underlying logics. The first logic moves from general to specific. The earlier part of the course aims to make the students familiar with the types of international organizations as well as to provide general knowledge about international organizations, their origins, and current functions and impact in the international system. This general knowledge will then be used as a basis for studying specific historical case studies and for conducting research on important global concerns that are relevant to international organizations today. The second logic alternates between the theoretical and the practical. The theoretical dimension focuses on the historical emergence of international organizations and their current roles in the international system today. The practical element implies examining real problems in the real world and discovering the conflicting perspectives among the different sectors of IOs. Moreover, students will have the chance to research in depth about real organizations that are of interest to them.

This course will be held to typical standards as seen in most top universities in Europe, that is, the work load and the expectations as to the integrity of the work will be fairly high. Active student participation is key to validate this course.

Criterios de Evaluación

Aporte I (10 points)

This grade comprises only the mid-term exam dealing with the theoretical background covered so far. In order to prepare for this exam, a review of all the readings alone may not suffice, class attendance is critical. Make sure you study the whole reader and your own notes from the class. Based on both, a multiple choice scheme and short open questions, this exam is scheduled for Tuesday, October 16, 2018.

Aporte II (10 points)

2 points – In-class exercises/activities: Average of in-class activities throughout mid-October until mid-November, when covering the overarching structure of the Economic Global Governance (GATTs, WTO, IMF, WB) These will consist of practical case studies to be worked in groups, and will be assessed by a common grade of 2 points (the same for each group member).

5 points - Research Paper: In pairs, students will be asked to submit a research-based paper due on November 18, 2018. Instructions and topic assignments will be shared with you towards the end of October.

3 points - RO Presentation: In groups, students will be asked to make a Power Point presentation introducing one Regional Organization. Distribution of topics and overall expectations for this assignment will be administered in advance. Due dates to be determined.

Aporte III (10 points)

This grade includes your overall performance in this course throughout the semester and therefore includes 3 items:

3 points – Class Participation: Average of your overall participation in class. Be aware, the more classes you skip or just sit idly in class, the more

this will affect this grade. In case you forgot how this is being evaluated, here a reminder from our first day of class:

Students will be evaluated on the basis of their contributions to the class discussions and the originality and quality of their arguments during debates. Class participation will be evaluated EVERY DAY of class using a 3-point scale, as follows:

3 = You have participated actively throughout the class

2 = You have participated somewhat actively throughout the class

1 = You participated passively in class.

0 = You were not in class or you did not pay attention during class.

Obviously, there is a qualitative difference between passive and active participation. Therefore, students are expected to keep up with the assigned readings and to come prepared to class to make substantively valuable contributions to class discussions. Also, I will take away points based on whether you were disruptive. If you were simply not paying attention then you either get a 0 or a (-1). If you were disruptive, then you get a (-2). It is not wise to be disruptive, because you will then need other class days to make up what you lost and there will be no extra credit options to "make up" negative points.

3 points – Pop Quizzes: Average of all 5 pop quizzes. At this stage of the semester, if you happen to miss a pop quiz, the only way to recover it is by making sure you don't miss the next ones, as they can take place any time. This is a long-term grade, so the more you do the readings and come prepared to class, the better. Keep in mind, extra credit can always help you to improve your average here.

4 points – Final class project: In order get practical insights into the problematic and complex interplay of IOs and emerging actors (NGOs, MNCs, etc), students will be expected to carry out an in-class project around a specific issue. Specific instructions for this assignment will be administered in advance in class. As preparation for this assignment, students must have read the book Qhapaq Ñan: La Ruta Inka de la Sabiduría by Javier Lajo before the first session for the final project (December 18, 2018). All the activities related to the final project, including the presentation event, will be carried out in Spanish.

Final Exam (20 points)

Final written exam on the content of all the course. Combining multiple choice and practical cases, the final exam will cover the theoretical and the more practical part of the course. Again, a review of all the readings alone may not suffice, class attendance and personal notes from the class are critical. Exact date to be confirmed, but it will certainly take place within the final exams period (January 14 – 25, 2019).
